| AUTHOR INDEX FOR VOLUME 81 | 661 |

The Subject Index for Volume 81 will appear in the December 1989 issue as part of a cumulative index for the year 1989.

Information for Authors

The *Journal of Magnetic Resonance* includes papers dealing with the theory, techniques, methods of spectral analysis and interpretation, spectral correlations, and results of magnetic resonance spectroscopy and related fields. The Editor seeks the assistance of expert referees in the evaluation of manuscripts of articles, but he alone is responsible for the final decision concerning acceptance.

Original papers only will be considered. Manuscripts are accepted for review with the understanding that the same work has not been published, that it is not under consideration for publication elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in the *Journal of Magnetic Resonance* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

A signed photocopy of the copyright assignment form which appears following this "Information" should be submitted to the Editor along with each manuscript. (This form will not be binding if the manuscript is not accepted for publication in the *Journal of Magnetic Resonance*.)

Fifty reprints of each paper are supplied without charge, and additional reprints may be ordered on a form that is sent to the authors with the proofs that the authors receive. The journal *assesses no page or publication charges*.

All manuscripts and books for review should be sent to the Editor, **Wallace S. Brey, Department of Chemistry, University of Florida, Gainesville, Florida 32611.**

Communications and Notes

Communications are preliminary accounts of work which, in the Editor's judgment, merit expedited publication because of special novelty or general interest. A Communication must be especially carefully prepared. Since it may not be refereed and the author will not receive galley proofs for correction, it is the responsibility of the author to ensure that the manuscript as submitted is free of typographical or substantive errors. The length of a Communication should be no more than that corresponding to five printed pages. Notes are complete accounts of work of limited scope.

Communications and Notes require no abstract and are not divided into sections.

Form of the Manuscript

Manuscripts should be submitted in triplicate. The original typewritten copy should be supplied; printout from a computer is acceptable only if it is of "letter quality." All typing must be double-spaced, including references, footnotes, and figure captions, on one side of paper approximately 22×28 cm (8.5×11 in.). Each page of the manuscript should be numbered. If the paper is lengthy, it may be divided into sections, but the sections should not be numbered. The first line of each paragraph is indented.

Cover Page. The first page contains the article title, the author's name, the laboratory where the work was done, and the address of the laboratory. At the bottom of this page should appear any footnotes to the title (indicated by superscript *, †, ‡).

Abstract. The second page of the manuscript for each regular paper should contain an abstract of 50–200 words, summarizing the nature and results of the research described. The abstract must be completely self-contained, having no references to items appearing in the body of the manuscript.

Equations, Symbols, and Abbreviations. Mathematical equations and symbols must be typewritten wherever possible. Equation numbers are given in *square brackets* to the right of the equation, and references in the text to equations should be in the form “Eq. [3].” Greek letters may be identified in pencil in the margin. Other nonstandard mathematical symbols should be clearly identified, in a separate list if necessary. Symbols for vectors and tensors should be clearly marked. The American Chemical Society’s *Style Guide*, 1986, or the *Style Manual of the American Institute of Physics* should be consulted for standard abbreviations, names, and symbols for units, as well as for important suggestions about grammar, style, and usage.

References. Literature references are cited in numerical order in the text by *in-line, parenthesized, italic numerals*. References to “unpublished” or “to be published” work from the author’s laboratory should not be given. However, papers actually accepted may be referred to as “in press” if the name of the journal is included.

The references themselves are to be typed double-spaced on a separate sheet in numerical order. Each reference contains the author’s initials, last name, journal name, volume, initial page number, and year in parentheses, *in that order*. The name of the journal is abbreviated in the style of *Chemical Abstracts Service Source Index*, 1985. For book references, the form is author’s name, name of the book in quotation marks, editor’s name (if any), edition if other than the first, chapter or page number, publisher’s name, place of publication, and year of publication.

Footnotes. Authors are urged to give careful thought to the logical construction of the manuscript, so that explanatory or parenthetical footnotes need not be employed. Any footnotes which are indispensable are not intermixed with references, but are indicated in the text by consecutive, superscript numerals, and each footnote will then appear in the print at the bottom of the page on which it is cited. In the manuscript, any footnotes to be included are gathered together in numerical order on a separate page.

Tables. Tables are numbered consecutively with Arabic numerals and are mentioned in order in the text. Each table should be laid out carefully, so that minimum space is used and entries are accurately grouped and clearly labeled. Usually, a table should be arranged vertically, with more rows than columns. Vertical lines are not used to separate the columns. Each table is provided with a title and typed on a separate sheet of paper. Footnotes to the tables are placed directly below it and are indicated by superscript, lowercase, italic letters (^{a,b,c}).

Figures and Diagrams. Figures are numbered consecutively with Arabic numerals and are mentioned in order in the text. They must be carefully drawn in black, waterproof drawing ink, to draftsman’s standards, with lettering by stencil or drawing machine. Freehand, penciled, or typewritten lettering is not acceptable. Lettering should include numerical scales and units for the two axes, and should be large enough to be legible after reduction of 50–60%. Legends are to be typed together on a separate sheet. Small figures must be mounted on sheets of full manuscript page size. Larger originals must be photographically reduced to page size and glossy high-contrast prints of this size must be supplied by the author. The original and two duplicates of each figure are required. Ink drawings should also be supplied for complex molecular formulas or diagrams which the printer cannot readily set in type. Illustrations in color can be accepted only if the authors defray the cost.

JOURNAL OF MAGNETIC RESONANCE

Manuscript Title _____

Authors _____

I hereby confirm the assignment of all copyrights in and to the manuscript named above in all forms and media to Academic Press effective if and when it is accepted for publication by Academic Press. (For U.S. government employee authors, this provision applies only to the extent to which copyright is transferable.) I also confirm that the manuscript contains no material the publication of which would violate any copyright or other personal or proprietary right of any person or entity, and I acknowledge that Academic Press is relying on this letter in publishing this manuscript.

Date

Signature

Printed Name

Title if not author

To be signed by at least one of the authors (who has obtained the assent of the others, if any). In the case of a "work made for hire" (a work prepared by an employee within the scope of his or her employment or commissioned as a work for hire under a written agreement), an authorized representative of the employer should sign.

Please note: Manuscripts cannot be processed for publication until the Publisher has received this signed form.

If the manuscript is not published by Academic Press, this letter will not take effect.

ADVANCES IN QUANTUM CHEMISTRY

Volume 19

edited by

Per-Olov Löwdin, John R. Sabin, and Michael C. Zerner

Advances in Quantum Chemistry publishes surveys of the current development in a field of investigation that falls between the historically established areas of mathematics, physics, chemistry, and biology. It provides a single vehicle for following progress in this borderline area.

1988, 365 pages, \$55.00

ISBN: 0-12-034819-5

ANNUAL REPORTS ON NMR SPECTROSCOPY

Volume 20

edited by

G.A. Webb

Volume 20 of **Annual Reports on NMR Spectroscopy** consists of accounts covering three main areas of molecular science: NMR of living systems is covered for the first time in this series; various aspects of Boron NMR are dealt with in two, largely complementary chapters; the third area reported on is that of NMR studies of alkali anions in nonaqueous solvents.

1988, 410 pages, \$133.00

ANALYTICAL GAS CHROMATOGRAPHY

Walter Jennings

This book provides an introduction and guide through the rapidly developing field of analytical gas chromatography for the novice to the skilled analyst. With an emphasis on clarity and simplicity, the author covers the practical considerations in setting up and using gas chromatography columns, with particular application to the analysis of:

- food, flavor and fragrance
- petroleum and chemicals
- environmental samples
- biomedical and clinical materials.
